Stack & Save — Product Test Report

Date: October 13, 2026 | **Product:** Stack & Save (standalone app) | **Status:** Prepared for sale as an asset — not deployed

This report confirms what Stack & Save is, what it does, and what was tested in October 2026. Results below are stated plainly: what passed, what is pending, and what was not verified in this environment.

WHAT STACK & SAVE IS

Stack & Save is a grocery savings app. Its core is a coupon-stacking engine: it takes the shopper's basket, applies sale prices, store coupons, manufacturer coupons, and rebate-app savings according to each store's stacking rules, and prices the basket across 17 store chains in 6 U.S. regions to recommend the cheapest checkout — a single store or a two-store split.

The purpose is practical: help people pay less for the groceries they already buy, without changing where they shop more than the savings justify.

PRICING

Free tier: browse, search, build a basket, use the scanner, and read the deal feed.

Checkout Saver — $7/month: coupon auto-matching, checkout comparison, split finder, and deal alerts.

COVERAGE — 17 RETAILERS, 6 REGIONS

Walmart, H-E-B, ALDI, United Supermarkets, Dollar General, Family Dollar, Kroger, Publix, Safeway/Albertsons, Target, Meijer, Giant, Stop & Shop, Food Lion, Costco, Sam's Club, and Piggly Wiggly.

WHAT IT DOES

- **Catalog and browse:** 286 products across 16 categories, presented as a category wall; tap a category to see its full shelf.
- **Search:** Full-text search across the catalog.
- **UPC barcode scanner:** Camera scanning plus manual entry; the app remembers new products added this way.
- **Basket:** Add products with quantities and carry the same basket through every comparison.
- **Checkout comparison:** Dated per-store quotes that include delivery fees and coupon savings, with the cheapest two-store split shown separately.
- **Coupon feed and alerts:** A sourced weekly deal feed with per-store stacking rules, plus live deal alerts matched to the shopper's area and basket.
- **Region selector:** Shoppers choose their region so stores, deals, and quotes match where they live.
- **Checkout handoff:** Pick list, CSV download, and official retailer deep links. The app does **not** place orders or process grocery payments.

KNOWN LIMITATIONS

- Shelf prices are dated planning estimates, not live retailer prices; sale prices refresh weekly.
- The coupon feed is curated and sourced, not literally exhaustive — many coupons live behind store logins.
- Stripe billing cannot charge until the buyer connects their own Stripe keys.
- Mobile camera scanning was not tested here; manual UPC entry is the verified fallback.

CONFIRMED TEST RESULTS — OCTOBER 2026

TEST	WHAT WAS CHECKED	RESULT
Catalog integrity	286 products across 16 categories, all present and browseable.	**PASS**
Navigation and search	Category-wall navigation and full-text search return the correct products.	**PASS**
Product photo audit	286 of 286 unique images. About 150 brand/label mismatches corrected (e.g. Pampers, Persil, Maud's re-labeled with true brands); foreign-language packaging replaced.	**PASS**
Comparison engine	Basket math including delivery fees, coupon savings, and the cheapest two-store split finder.	**PASS**
Coupon feed	61 sourced deals from the Oct. 13–21 weekly ads, all 17 stores, each with source link, dates, coupon steps, and caveats.	**PASS**
Paywall gating	Free vs. Checkout Saver access enforced server-side, not only in the interface.	**PASS**
Honest labeling	Every price is dated and labeled as a planning estimate, not a live price.	**PASS**
Weekly refresh	Deal-refresh schedule registered to run on Wednesdays.	**PASS**
Stripe billing	Subscribe, verify, and cancel code paths exist, but no keys are connected and no real charge was tested.	**PENDING**
UPC camera scanning	Camera path not tested in this desktop-only environment. Manual-entry fallback exists.	**UNVERIFIED**

QUESTIONS AND ANSWERS

Does the app place grocery orders?
No. It hands the basket to the retailer's own checkout through a pick list, a CSV download, and official retailer deep links.

Does it handle grocery payments?
No. Shoppers pay each store directly. The only in-app billing is the $7/month subscription through Stripe, which is not yet live.

Is the $7/month tier active?
No. The wiring is complete and the paywall gates the paid features, but billing goes live only when Stripe keys are connected — the buyer's step.

Are the prices live?
No. Prices are dated planning estimates, labeled as such in the app. Sale pricing refreshes weekly with the deal feed.

Can it show every coupon?
No. It provides a sourced weekly feed for all 17 stores, plus direct links to each store's own coupon center. Coupons behind an individual store login cannot be surfaced.

Who is selling it?
Prepared by Redemption Road Music Group. Stack & Save is a standalone app, offered for sale as a complete product and asset.

> **Summary:** The catalog, comparison engine, coupon feed, paywall, and checkout handoff are built and tested as described above. Open items: Stripe keys (buyer-side, by design) and mobile camera scanning (unverified here).
